Profile Summary

B.Tech Computer Engineering student with hands-on experience in Docker, Kubernetes, Machine Learning, and Linux systems. Skilled in containerization, orchestration, and deploying scalable applications in Linux environments. Proficient in Python for ML model development and automation, with a focus on performance optimization.

Education

Sardar Patel Institute of Technology

3rd Year B.Tech Computer Engineering

Aug 2023 – Present

Mumbai, India

Six Ladders

Minors in Finance & Strategic Management

Feb 2025 – Present

Mumbai, India

Project's

GrowKaro – AI-Powered Competitor & Review Intelligence Platform | *FastAPI, React, PostgreSQL, XGBoost, RoBERTa, Gemini API, ChromaDB* | [Repo](#) *Jan 2026*

- Developed an AI-powered hyper-local business intelligence platform to assist SMBs with real-time competitor and market analysis using automated review ingestion from Google Maps API.
- Implemented Aspect-Based Sentiment Analysis (ABSA) using a RoBERTa Transformer model to extract fine-grained insights (service, hygiene, pricing, etc.) from unstructured customer reviews.
- Designed a hybrid forecasting engine (XGBoost + sentiment features) to predict next-month star ratings, demonstrating improved accuracy over baseline time-series models.
- Built a Retrieval-Augmented Generation (RAG) pipeline using ChromaDB and Gemini LLM to generate context-aware strategic recommendations and executive summaries.
- Architected a modular microservices system (Client, API, Intelligence, Data layers) with a React + Tailwind dashboard for real-time visualization and competitor “Battlefield Maps”.
- Officially registered under the Copyright Act, 1957 (Certificate No. LD-20260180966). [View Certificate](#)

FloatChat – Real-Time Scientific Conversational Assistant | *FastAPI, Python, React, NLP, RAG, WebSockets* | [Repo](#) *Feb 2026*

- Built a conversational assistant integrating scientific ARGO float data with chat-based queries using FastAPI and Python.
- Implemented WebSocket and REST communication to support real-time interactions between client UI and backend services.
- Utilized NLP and RAG utilities in the backend to process natural language questions and generate context-aware responses.
- Enabled data ingestion and transformation of local ARGO netCDF scientific datasets for interactive exploration within the app.

CrickHero – Interactive Cricket Analytics Dashboard | *Python, Streamlit, Cricket APIs* | [Repo](#) *Feb 2026*

- Built an interactive cricket analytics dashboard using Streamlit to fetch and visualize live match data via Cricket APIs.
- Implemented real-time scorecards, player statistics, and match summaries for enhanced user engagement.
- Designed modular Python utilities to parse API responses and generate summary insights on batting, bowling, and team performance.

Technical skills

Programming Languages: C, C++, Python, SQL

Databases: MySQL, PostgreSQL

Tools & Platforms: Git, GitHub, Docker, kubernetes
